DC TIG

DC TIG can be used for all steel, stainless steel, copper, copper alloys and titanium. When welding in DC current HF Pulse start allows easy not contact starts for critical applications.

VRD

A built in VRD (Voltage Reduction Device) delivers added safety when operating in Stick or Lift-TIG mode and meets the requirements of site work. Fully compliant to Australian Standards AS 60974.1 and AS1674.2 CAT C.

AC TIG

AC can be used specifically for TIG welding aluminium and aluminium alloys. The balance between positive and negative can be adjusted to control the amount of oxide cleaning for a more penetrating weld. When welding in AC current HF pulse start allows easy arc starting when welding aluminium.

INTEGRATED **GAS VALVE**

HF PULSE START

HF Pulse is a non-contact arc starting method allowing easy arc start without the interference problems with conventional HF and eliminates tungsten contamination. Available in AC or DC TIG mode.
