WELDMATIC FABRICATOR: CP33 DUTY CYCLE RATING

The 60% Duty Cycle rating applied to the Weldmatic Fabricator CP33 has been adjusted to exactly suit the requirements of AS1966.1. The rating is now specified as 320 Amps, 33 Volts, 60% Duty.

The machine data plate and operating manual have been accordingly updated. Note that this is a documentation adjustment only, the machine design and performance is unaffected.

This change was introduced with Revision B of the product.

P.S. The sales brochure has also been modified at the last reprint in November 1994.
