## WELDMATIC 325 CONTACTOR PART NUMBER CP27 - 0/18

Recent supplies of this Contactor from Kraus and Naimer have suffered with problems of sticking in the closed position. The manufacturer has confirmed that this has resulted from contamination of some of the core lamination material with hot-melt glue.

At least until the manufacturer can assure us that their product is free of the defect, a replacement contactor has been sourced from Telemecanique, Part No. LCD1810CS. This device physically and electrically replaces the K & N contactor.

Please return any Branch Stock of K & N Contactors to SA for credit with supplier. Until further notice, only the Telemecanique Contactor will be used for production and spare parts applications. The WIA part number remains unchanged.
