BULLETIN #154

FABRICATOR WELDMATIC 395

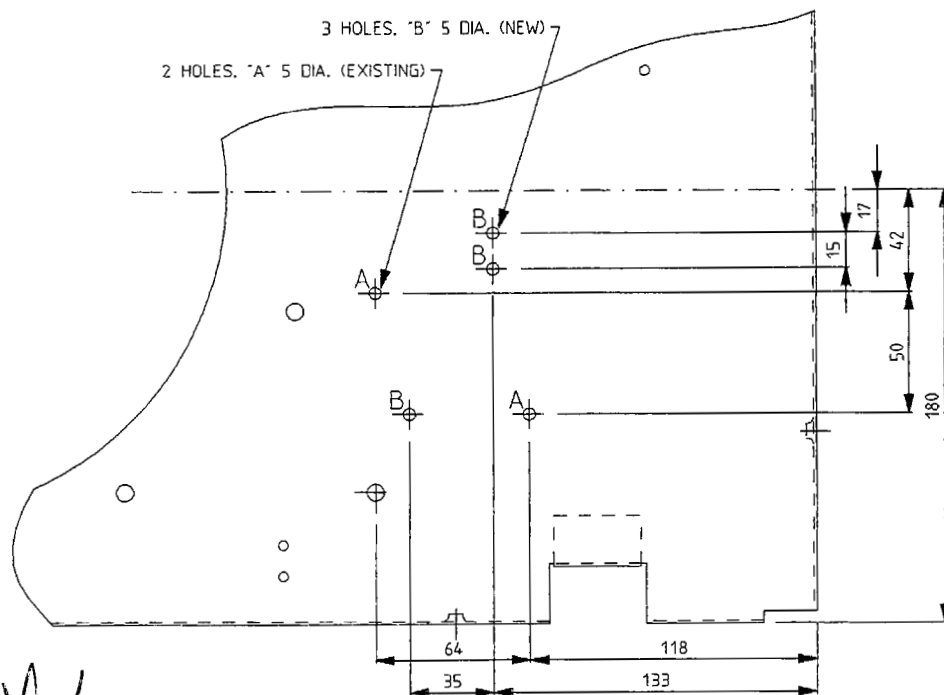

CONTACTOR REPLACEMENT

The original Kraus & Naimer welding contactor used in the Fabricator and Weldmatic 395 will now be replaced by two equivalent alternatives - Klockner Moeller or Sprecher Schuh. As of October, the new contactors will be used for production and spare part applications.

WIA part number **CP38-0/10** for the contactor remains unchanged.

For the Fabricator, the new contactor is a direct replacement.

Depending on the brand of contactor used, retro fitting the new contactor to existing Weldmatic 395 will require two additional holes to be drilled in the shelf panel. Refer to the diagram below for new mounting hole locations (marked "B").

James Chin

Note : Holes marked "A" are existing holes
